

Curriculum Vitae

Date Prepared: 10/24/2019
Name: Steven Jon Russell, M.D., Ph.D.
Office Address: MGH Diabetes Research Center
50 Staniford St., Suite 301
Boston, MA 02114
Work Phone: 617-726-1848
Work Email: sjrussell@mgh.harvard.edu
Work FAX: 617-643-0697
Place of Birth: Lincoln, Nebraska, U.S.A.
Residence: Lincoln, Massachusetts, U.S.A.

Education:

1990	B.S.	Biochemistry	Trinity University
2001	M.D., Ph.D.	Medicine, Biological Chemistry	University of Texas Southwestern Medical Center

Postdoctoral Training:

7/2001-6/2003	Resident	Internal Medicine	Massachusetts General Hospital
7/2003-6/2006	Clinical Fellow	Endocrinology	Massachusetts General Hospital
7/2004-7/2008	Research Fellow	C. Ronald Kahn	Joslin Diabetes Center

Faculty Academic Appointments:

7/2006-3/2012	Instructor in Medicine	Harvard Medical School
4/2012-11/2017	Assistant Professor of Medicine	Harvard Medical School
12/2017-	Associate Professor of Medicine	Harvard Medical School

Appointments at Hospitals/Affiliated Institutions:

7/2006-8/2015	Assistant in Medicine	Internal Medicine	Massachusetts General Hospital
8/2015-present	Assistant Physician	Internal Medicine	Massachusetts General Hospital

Other Professional Positions:

1987-1990	NSF Summer Undergraduate Research Fellow	Trinity U., San Antonio, TX
2014-2016	Scientific Advisory Board (2-3 meetings per year)	Tandem Diabetes
2014-	Scientific Advisory Board (~2 meetings per year)	Companion Medical
2016-	Scientific Advisory Board (monthly meetings)	beta bionics
2017-	Scientific Advisory Board (1 meeting per year)	Unomedical

Committee Service:

Local

2003-2006	Teaching & Training Council	MGH Department of Medicine Member, fellow representative
2005-2006	Perioperative Diabetes Management Taskforce	Massachusetts General Hospital, member

National

2012-	Initiative to Advance Pediatric Therapeutics	National Institute of Child Health and Human Development, member of Diabetes Core Group
2012-	Clinical Development Advisory Panel	California Institute of Regenerative Medicine, member
2013-	Glu Research Advisory Board	T1D Exchange, member

Professional Societies:

1991-	American Medical Association
2001-	American College of Physicians
2005-	Endocrine Society
2005-2012	Longevity Consortium
2007-2012	American Aging Association
2007-	American Diabetes Association

Grant Review Activities:

2011	Artificial Pancreas Study Section (SBIR)	NIH/NIDDK, ad-hoc member
2011-2012	National Scientific Advisory Council	American Foundation for Aging Research
2012	Medical Research Council (UK)	Medical Research Council (UK), ad-hoc reviewer
2012	Strategic Partnership Awards review panel	California Institute for Regenerative Medicine, member
2012-2014	Clinical Development Advisory Panel	California Institute for Regenerative Medicine, member
2013	A*Star Biomedical Engineering Program (BEP) grant	Center for Integration of Engineering and Medicine, ad hoc reviewer
2013	CIRM Translational Portfolio Assessment	California Institute for Regenerative Medicine, member
2013-2014	Grants Working Group	California Institute of Regenerative Medicine, member
2013	Disease Team Therapy Development III Awards review panel	California Institute for Regenerative Medicine, member
2014	Fellowship Grant Evaluation Committee	The Danish Diabetes Academy, ad hoc reviewer
2014	Women's Health Research at Yale	Yale University School of Medicine, external reviewer
2014	Stem Cell Alpha Clinics review panel	California Institute for Regenerative Medicine, member
2015	ZRG1 EMNR-P 03 M, Member Conflict SEP for Diabetes and Obesity research	NIH / CIDO, chair
2015-	Clinical Advisory Panel – Viacyte Project	California Institute for Regenerative Medicine, scientific advisor
2016-	Grants Working Group	California Institute for Regenerative Medicine, member
2017	Harvard Data Ideation Challenge: Good Questions Meet Big Data	Harvard Clinical and Translational Science Center, reviewer
2017	Helmsley Charitable Trust	Helmsley Charitable Trust, ad-hoc External Reviewer
2015-2018	ADA Research Grant Review Committee	American Diabetes Association, member Core Grant review committee

2018 NIDDK ZDK1 GRB-R (J1) Review Panel, RFA- NIH / NIDDK, reviewer
 DK-18-003: "Elucidating the Effect of Glycemic Excursions on Patient Well-being and Cognitive Status in People with Type 1 Diabetes."

Editorial Activities: Reviewer

Aging Cell
 Annals of the New York Academy of Sciences
 BioEssays
 BMJ Open Diabetes Research & Care
 Diabetes
 Diabetes Care
 Diabetes, Obesity and Metabolism
 Diabetes Technology and Therapeutics
 The Journal of Pharmacological and Toxicological Methods
 The FASEB Journal
 The Journal of Diabetes Science and Technology
 The Lancet
 The Lancet Diabetes & Endocrinology
 Molecular and Cellular Endocrinology
 The New England Journal of Medicine
 PLoS ONE

Other Editorial Roles

2010	Co-editor, Symposium: Glucagon Physiology and Pharmacology (Vol. 4, Issue 6, November 2010)	Journal of Diabetes Science and Technology
2012-	Section Editor, Technological Developments in Diabetes Therapies (Vol. 12, Issue 6, December 2012)	Current Diabetes Reports
2012-	Member, Advisory Board	diaTribe, diabetes CloseUp, and CloserLook (Close Concerns)
2015-	Member, International Advisory Board	Lancet Diabetes and Endocrinology Diabetes
2017- 2018	Abstract reviewer, American Diabetes Association Annual Scientific Sessions	

Honors and Prizes:

1986-1990	President's/Trustee Scholarship	Trinity University	National Merit Finalist
1994	High Pass	University of Texas Southwestern, Biochemistry & Molecular Biology Graduate Program	Outstanding qualifying exam proposal in NIH grant form
1997	Young Scientists' Program Fellowship	American Society for Biochemistry and Molecular Biology / International Union of Biochemistry and Molecular Biology	Abstract competition
1997-1998	Presenter	29th and 30th Annual Sigma Xi Graduate Student Research Forum	Abstract competition
1997	Sigma Xi Membership	Sigma Xi	

1997	Exceptional presentation	Graduate Student Illustrations and Presentations Session	Poster competition
2000	Alpha Omega Alpha Membership	Alpha Omega Alpha	
2008	Scholarship to MBL Molecular Biology of Aging Course	Ellison Medical Foundation	
2013	Granite Gala Honoree	Juvenile Diabetes Research Foundation – Northern New England Chapter	With Edward Damiano, awarded for work on the bionic pancreas
2013	Awardee	NIH Loan Repayment Program	3-year awardee
2015	Panel Chair	NIH CIDO Member Conflict SEP for Diabetes and Obesity research	
2016	Stephen M. Krane, MD Lectureship Award	Massachusetts General Hospital Department of Medicine Research Council	Outstanding Young Investigator

Report of Funded and Unfunded Projects

Funding Information:

Past

2006-2007	Adipocyte Insulin Signaling in Metabolism and Aging NIH, Ruth L. Kirschstein National Research Service Award (1 F32 AG028265-01) PI (\$52,048) The goal of this study was to investigate how insulin signaling in adipocytes regulates lifespan in long-lived fat-specific insulin receptor knockout (FIRKO) mice.
2007	Closed-loop blood-glucose regulation in type 1 diabetes: A clinical trial Wallace H. Coulter Foundation, Translational Partners Award MGH PI (\$0 - full budget of \$100,000 spent on preclinical development at Boston University site) The goal of this project was to complete preclinical experiments on a closed-loop blood glucose control system and to prepare an IDE application for human studies.
2007-2010	Utility of Continuous Glucose Monitoring for Maintenance of Normoglycemia in ICU Patients Abbott Diabetes Care PI (\$110,000) The goal of this study was to test the accuracy of a continuous glucose monitoring device that measures interstitial fluid glucose (Abbott Navigator) in critically ill ICU patients.
2009-2011	Development and preclinical testing of a closed-loop control system for blood-glucose regulation in the ICU Wallace H. Coulter Foundation, Translational Partners Award MGH PI (\$0 - full budget of \$200,000 spent on preclinical development at Boston University site) The objective of this program was to perform pre-clinical experiments on a closed-loop control system for regulating blood glucose in critically ill patients.
2009-2011	Adipocyte Insulin Signaling in Metabolism and Aging NIH/NIA, ARRA Supplement (3 K08 AG032869-02S1) PI (\$99,937) This is an American Reinvestment and Recovery act supplement to 1 K08 AG032869-01 to fund hiring of a research assistant and purchase of equipment.
2007-2011	Closed-loop glucose control for automated management of type 1 diabetes Juvenile Diabetes Research Foundation, Clinical Investigations Research Grant

- MGH PI (\$1,034,092)
The objective of this project was to test the ability of a closed-loop control system to regulate blood glucose in adults with type 1 diabetes.
- 2010-2012 In-patient trials of automated glucose control in children with type 1 diabetes
Leona M. and Harry B. Helmsley Charitable Trust,
MGH PI (\$640,635)
The objective of this project is to test the ability of a closed-loop control system to regulate blood glucose in children with type 1 diabetes.
- 2008-2013 Adipocyte Insulin Signaling in Metabolism and Aging
NIH/NIA-American Foundation for Aging Research, Paul Beeson Career Development Award in Aging Research (1 K08 AG032869-01)
PI (\$799,719)
The goal of this study is to investigate how insulin signaling in adipocytes regulates lifespan in long-lived fat-specific insulin receptor knockout (FIRKO) mice.
- 2009-2013 Clinical trials of a closed-loop control system for type 1 diabetes management
NIH/NIDDK (1R01DK085633-01)
MGH PI (\$1,812,925)
The goal of this trial is to test the safety and efficacy a bi-hormonal closed-loop blood glucose control system in adults with type 1 diabetes.
- 2010-2014 Selecting Insulin Analogs for Closed-loop Control Using Multiplex Pharmacokinetic Profiling
Leona M. and Harry B. Helmsley Charitable Trust (09-T1D038)
PI (\$526,700)
The objective of this study is to determine whether the pharmacokinetic characteristics of rapid acting insulin preparations vary within a single individual.
- 2011-2013 Subcutaneous continuous glucose monitoring and intravenous dosing of insulin and dextrose for automated glycemic control in the in-patient setting: A clinical trial in the MGH CRC
Wallace H. Coulter Foundation, Translational Partners Grant
MGH PI (\$90,000)
This is a first-in-man closed-loop blood glucose control system for inpatient application using interstitial fluid continuous glucose monitoring intravenous insulin and dextrose.
- 2012-2014 Pharmacokinetic Comparison of Intradermal vs. Sub-cutaneous Insulin and Glucagon Delivery in Volunteers with Type 1 Diabetes
Leona M. and Harry B. Helmsley Charitable Trust
PI (\$87,959)
This study is designed to determine the impact on insulin and glucagon pharmacokinetics of intradermal vs. subcutaneous delivery.
- 2013-2014 Testing a bi-hormonal bionic pancreas in an outpatient study in children with type 1 diabetes at the Clara Barton/Joslin Camps
Helmsley Trust Foundation (2014PG-T1D006)
MGH PI (\$416,000)
The goal of this project is to test the ability of a wearable bihormonal bionic pancreas to provide BG control in pediatric volunteers with type 1 diabetes (ages 12-20) in the setting of a summer diabetes camp outpatient study.
- 2012-2015 Closed loop microdose glucagon administration for the automated prevention and treatment of hypoglycemia
American Diabetes Association (7-12-HYPO-07)
PI (\$499,998)
This project is a randomized, double-blinded, placebo controlled trial of automated, closed-loop microdose glucagon delivery for prevention and treatment of hypoglycemia in patients with type 1 diabetes.
- 2014-2015 Testing a bionic pancreas in an outpatient study in preadolescent children with type 1 diabetes at the Clara Barton/Joslin Camps

- Helmsley Trust Foundation (2014PG-T1D032)
MGH PI (\$514,300)
The goal of this project is to test the ability of a wearable bihormonal bionic pancreas to provide BG control in pediatric volunteers (ages 6-11) with type 1 diabetes in the setting of a summer diabetes camp outpatient study.
- 2012-2016 Translational studies of a bionic pancreas for out-patient diabetes management
NIH/NIDDK (1R01DK097657-01)
PI (\$2,911,229)
The project will test a fully automated, wearable, bi-hormonal closed-loop bionic pancreas in adults and children over extended periods (up to six days of wear) in environments that will approximate the rigors of the outpatient environment. Adults experiments will last five days while subjects live in a hotel and interact with the city environment, experiments in children will last six days in a diabetes camp environment.
- 2013-2016 A multicenter outpatient trial of a bihormonal bionic pancreas
NIH/NIDDK (1DP3DK101084)
PI (\$2,880,000)
The goal is to test fully automated, wearable, bi-hormonal closed-loop bionic pancreas in adults over extended periods (12 days of wear) at home and at work in four US centers with MGH as the coordinating center.
- 2012-2016 Bionic Pancreas with Minimally Invasive Continuous Insulin Monitoring
Juvenile Diabetes Research Foundation – JDRF (17-2013-485)
PI (\$765,360)
The goal of this project is to develop continuous insulin monitor. The device will use a probe about the same size as an infusion set. It will continuously sample the insulin that has been absorbed from the blood into the tissues using microdialysis and measure it with a flow-through microfluidic immunoassay.
- 2014-2016 Equivalence of a Stable Liquid Glucagon Formulation with Freshly Reconstituted Lyophilized Glucagon
Helmsley Trust Foundation (2014PG-T1D006)
PI (\$174,130)
The goal of this project is to test the equivalence of a stable glucagon formulation with freshly reconstituted samples of a formulation that has been used successfully in a bionic pancreas, but it not stable enough for prolonged use.
- 2015-2016 The Set-point Study: Evaluating Effects of Changing Glucose Target on Bionic Pancreas Performance
Helmsley Charitable Trust
PI (\$996,041)
This study is designed to determine the effect on mean glucose, hypoglycemia, glucagon usage, and insulin usage of adjusting upward the glucose target of the bihormonal bionic pancreas (BP), and determine whether there is a target at which adequate glycemic control is achieved by an insulin-only BP with minimal hypoglycemia. An outpatient trial will compare 6 periods of 3 days in random order, of usual care, bihormonal BP targeting 100, 115, and 130 mg/dl, and insulin-only BP targeting 130 and 145 mg/dl, with in-clinic exercise in the fasted state at the end of the 130 mg/dl insulin-only and bihormonal periods.
- 2015-2017 The Glucagon and Alcohol Study: Evaluating the Effect of Ethanol on Glucagon Effectiveness
The Helmsley Charitable Trust Foundation
PI (\$474,423)
The goal of this project is to evaluate the effect of intoxication with ethanol on the effectiveness of glucagon in preventing hypoglycemia.
- 2016-2017 The iLet Feasibility Trial Testing the iLet, a Fully Integrated Bihormonal Bionic Pancreas with ZP4207
Zealand Pharmaceuticals

PI (\$145,377)

This is the first study testing the stable glucagon analog ZP4207 in an automated glucose management application. It will be tested in the iLet bionic pancreas in an in-clinic study primarily testing safety and tolerability in comparison to freshly reconstituted Lilly glucagon. Secondary outcomes include glycemic control metrics.

2017-2018 The Monitoring Study for Bionic Pancreas
The Helmsley Charitable Trust Foundation
PI (\$755,626 + \$90,000 supplement)

The goal of this study is to determine the difference in observed hypoglycemia with and without remote monitoring for hypoglycemia in usual care, insulin-only bionic pancreas, and bi-hormonal bionic pancreas. A second goal is to test 2 new CGM technologies in the outpatient setting and possibly qualify them as inputs to the bionic pancreas.

2018 Safety and Efficacy of a Novel Insulin Infusion Set
Beta Bionics
PI (\$74,700)

The goal of this study is to test a novel infusion set with a steel cannula intended for use with the Beta Bionics iLet by comparing it with a comparable commercially available infusion set, the Contact Detach.

2017-2018 Analysis of Breath and Sweat for Volatile Organic Compound Markers of Hypoglycemia
The MITRE Corporation
PI (\$89,661 + \$50,000 and \$40,000 supplements)

The goal of this study is to collect and analyzed breath and sweat samples from participants in a bionic pancreas study for VOC markers of hypoglycemia.

Current

2015-2019 Final clinical studies for submission of a pre-market approval application to the FDA for a Bionic Pancreas that automates type 1 diabetes management
NIH/NIDDK (1UC4DK108612-01 / 1UC4DK108612-01S1)
PI (\$1,498,323 [-01] / \$11,957,319 [-01S1])

The goals of this grant are to do the first-in-humans testing of the fully integrated bionic pancreas iLet in its final form in a bridging study (-01) as well as to perform the pivotal study of the iLet in the bi-hormonal configuration (-01S1).

2017-2019 Bi-hormonal Bionic Pancreas for the Treatment of Diabetes Post-Pancreatectomy in Children with Congenital Hyperinsulinism – A Pilot Study
Zealand Pharma
MGH PI (\$100,000)

The goal of this study is to perform an inpatient pilot feasibility study of the bi-hormonal bionic pancreas in patient with congenital hyperinsulinism who were treated with subtotal pancreatectomy and have now developed insulin dependent diabetes.

2018-2019 Bi-hormonal Bionic Pancreas for the Treatment of Diabetes Post-Pancreatectomy in Children with Congenital Hyperinsulinism – A Pilot Study
Penn Orphan Disease Center 2017 Million Dollar Bike Ride Pilot Grant Program
MGH PI (\$87,109)

This is an application to supplement the funding for this study already obtained from Zealand Pharma.

2018-2019 Effect of Accelerated Insulin Pharmacokinetics on Bionic Pancreas Performance
Novo Nordisk
MGH PI (\$182,352)

The goal of this study is to add an arm to an NIH-funded bridging study with the insulin-only configuration of the bionic pancreas in which it delivers faster aspart, an ultra-fast insulin. The hypothesis is that faster insulin PK will improve glycemic control without adjustment of the algorithmic assumptions about insulin PK built into the bionic pancreas.

- 2019-2021 Effect of Insulin Analog Choice on the Performance of the Bionic Pancreas
The Helmsley Charitable Trust Foundation
PI (\$851,235)
The goal of this study is to compare the performance of the bionic pancreas with three different insulin analogs (insulin aspart, insulin lispro, and insulin glulisine) in individuals for whom there are differences in the pharmacokinetic characteristic different insulin analogs. A second goal is to develop assays for anti-insulin antibodies that are specific to insulin analogs and do not cross-react with human insulin or other analogs.
- 2018-2019 Effect of Accelerated Insulin Pharmacokinetics and Algorithmic PK Settings on Bionic Pancreas Performance
PI (\$516,858)
The goal of this study is to determine whether adjustment of algorithmic parameters relating to insulin pharmacokinetics can provide additional improvements in glycemic control when combined with the use of an ultrafast insulin, faster aspart.
- 2018-2021 Development of “hyper-rapid” insulin receptor activators that are more rapidly absorbed and cleared than ultra-rapid insulin formulations
Helmsley Charitable Trust
PI (\$823,279)
The goal of this study is to develop insulin receptor activator peptides with no primary structural homology to insulin that are more rapidly absorbed into the blood and much more rapidly cleared from the blood than ultra-rapid insulin formulations that are based on insulin or insulin analogs.
- 2018-2023 Clinical studies of a bionic pancreas for automated glucose management in cystic fibrosis-related diabetes mellitus
NIH/NIDDK 1R01DK119699-01
Co-investigator (\$3,355,678)
The goal of this study is to test insulin-only and bihormonal configurations of the bionic pancreas in people with insulin-dependent cystic fibrosis-related diabetes both in the outpatient setting and during hospitalizations for cystic fibrosis exacerbations.

Projects Submitted for Funding

- 2018-2021 Bihormonal Bionic Pancreas Pivotal Trial Ancillary Study: Evaluation of Change in Diet, Physical Activity and Body Composition
NIH/NIDDK 1R01DK116694-01A1
PI (\$2,431,799)
The goal of this study is to establish patterns of change in weight, body composition and markers of habitual dietary and physical activity patterns among patients with T1D upon use of a bi-hormonal artificial pancreas device. (SRG review pending)

Unfunded Current Projects

- 2016- Clinical studies of a bionic pancreas for automated glucose management of insulin dependent type 2 diabetes mellitus
PI (no funding – revising an R01 application)
The goal of this pilot feasibility study is to test the safety and efficacy of the insulin-only configuration of the bionic pancreas in patients with type 2 diabetes who take both basal and meal bolus insulin daily.

Report of Local Teaching and Training

Teaching of Students in Courses:

2005-6	Patient-Doctor II 2 nd year medical students	Harvard Medical School Examiner, Endocrine section of OSCE
2007	Human Systems 1 st year medical students	Harvard Medical School Substitute tutor, Endocrine section
2014-2015, 2017	HST-060 (Endocrinology) 1 st year HST (MD/PhD) students	Harvard Medical School 75 minute lecture on type 1 diabetes

Formal Teaching of Residents, Clinical Fellows and Research Fellows (post-docs):

2012-	Tools of Human Investigation Course for Internal Medicine Residents	Massachusetts General Hospital 90 minute lecture, 4 times per year
-------	------------------------------------------------------------------------	-----------------------------------------------------------------------

Clinical Supervisory and Training Responsibilities:

2008-	Endocrine Consult Service Attending Physician	Rounds 8:30-10:00 daily, writing attending notes on new consults, 2-3 weeks annually
2010-	Endocrine Fellow Diabetes Clinic Preceptor	Occasional preceptor of fellows in clinic

Laboratory and Other Research Supervisory and Training Responsibilities:

2016-2017 (fellow), 2017- (instructor)	Research mentor for Rabab Jafri, MD who completed her clinical fellowship in Pediatric Endocrinology	Primary mentoring and supervision; at least weekly meetings.
2017-2018 (fellow), 2018- (instructor)	Research mentor for Jordan Sherwood, MD who completed his clinical fellowship in Pediatric Endocrinology	Primary mentoring and supervision; at least weekly meetings.
2019-	Research mentor for Marwa Tuffaha, MD, who completed her clinical fellowship in Pediatric Endocrinology	Primary mentoring and supervision; at least weekly meetings.
2019-	Research mentor for Luz Castellanos, MD, who completed her clinical fellowship in Pediatric Endocrinology	Primary mentoring and supervision; at least weekly meetings.

Other Mentored Trainees and Faculty:

1995-98	Supervision of 1st and 2nd year graduate students rotating through the laboratory my PhD mentor, University of Texas Southwestern Medical Center	Daily supervision of 7 rotation students for 3 months each
2007-12	Supervision of research assistants, Joslin Diabetes Center	Daily supervision and mentoring; On former RA has completed a PhD in Biology at Boston University
2012-2014 (Fellow) 2014-15 (Instructor)	Research mentor for Manasi Sinha, MD, MPH, who completed her clinical fellowship in Pediatric Endocrinology	Primary mentoring and supervision; at least weekly meetings; we continue to work on papers although she is now at Covance.

2014-2015 (fellow), 2015-2017 (instructor)	Research mentor for Laya Ekaspour, MD, who completed her clinical fellowship in Pediatric Endocrinology	Primary mentoring and supervision; at least weekly meetings; we continue to work on papers although she is now at Stanford.
2012-2018	Co-mentorship of Lindy Kahanovitz with Tania Konry. Lindy is a graduate student who did her thesis work at MGH while still matriculating at Ben Gurion University because her husband took a postdoctoral fellowship at HMS.	At least weekly meetings; PhD was conferred 6, 2018.
2017-2018 (fellow)	Research mentor for Jason Sloane, MD who completed his clinical fellowship in Adult Endocrinology	Primary mentoring and supervision; at least weekly meetings. In 2018 he switched to a project mentored by Deborah Wexler at MGH.

Formal Teaching of Peers (e.g., CME and other continuing education courses):

No presentations below were sponsored by outside entities

2013	Continuous Glucose Monitoring and Automated Glucose Control / invited lecture to Clinical Endocrinology 2013, Boston, MA	ACCME accredited CME course by MGH/HMS; participants were from US, Europe, Asia, and Latin America
2014	The Bionic Endocrine Pancreas: Automated Management of Glycemia / Invited lecture Clinical Endocrinology 2014 / Boston, MA	ACCME accredited CME course by MGH/HMS; participants were from US, Europe, Asia, and Latin America
2015	The Bionic Endocrine Pancreas: Automated Management of Glycemia / invited lecture Clinical Endocrinology 2015 / Boston, MA	ACCME accredited CME course by MGH/HMS; participants were from US, Europe, Asia, and Latin America
2016	Automating Glycemic Regulation in Diabetes Mellitus with a Bionic Pancreas / Invited lecture Clinical Endocrinology 2016 / Boston, MA	ACCME accredited CME course by MGH/HMS; participants were from US, Europe, Asia, and Latin America
2016	New Technologies in the Treatment of Diabetes / Invited lecture Internal Medicine: Comprehensive Review and Update 2016 / Boston, MA	Harvard Medical School CME course
2017	Developing New Treatments for Diabetes / Invited lecture Clinical Endocrinology 2017 / Boston, MA	ACCME accredited CME course by MGH/HMS; participants were from US, Europe, Asia, and Latin America
2017	New Technologies in the Treatment of Diabetes / Invited lecture Internal Medicine: Comprehensive Review and Update 2017 / Boston, MA	Harvard Medical School CME course
2018	The future of insulin delivery: The artificial pancreas / Invited lecture Clinical Endocrinology 2018 / Boston, MA	ACCME accredited CME course by MGH/HMS; participants were from US, Europe, Asia, and Latin America
2018	The future of insulin delivery: The artificial pancreas / Invited lecture	Harvard Medical School CME course

	Internal Medicine: Comprehensive Review and Update 2018 / Boston, MA	
2019	The future of insulin delivery: The artificial pancreas / Invited lecture Clinical Endocrinology 2019 / Boston, MA	ACCME accredited CME course by MGH/HMS; participants were from US, Europe, Asia, and Latin America

Local Invited Presentations:

No presentations below were sponsored by outside entities

1997	Molecular Gears of Circadian Clocks / Biochemistry Department Graduate Student/Post-doctoral Fellow Colloquium University of Texas Southwestern Medical Center / Dallas, TX	
2005	Diabetic Complications / Podiatry Department Seminar Massachusetts General Hospital / Boston, MA	
2007	Continuous Glucose Monitoring / Special Interest Group Nursing Seminar Massachusetts General Hospital / Boston, MA	
2008	Continuous Glucose Monitoring: Update / Diabetes Research Center Weekly Research Meeting Massachusetts General Hospital / Boston, MA	
2008	Closed-loop Blood Glucose Control / Diabetes Research Center Weekly Research Meeting Massachusetts General Hospital / Boston, MA	
2008	Closed-loop Blood Glucose Control / Pediatric Endocrinology conference Massachusetts General Hospital / Boston, MA	
2009	Closed-loop Blood Glucose Control – Update on Clinical Trials / Diabetes Research Center Weekly Research Meeting Massachusetts General Hospital / Boston, MA	
2009	Bi-hormonal Closed-loop Blood Glucose Control for Type 1 Diabetes Mellitus / Pediatric Endocrinology conference Massachusetts General Hospital / Boston, MA	
2009	Bi-hormonal Closed-loop Blood Glucose Control for Type 1 Diabetes Mellitus / Massachusetts General Hospital / Boston, MA	
2010	Regulation of Aging by Insulin Signaling in Mammals / Geriatric Medicine Grand Rounds Massachusetts General Hospital / Boston, MA	
2010	Regulation of Aging by Insulin Signaling in Fat / Internal Seminar Series Joslin Diabetes Center / Boston, MA	
2010	Regulation of Aging by Insulin Signaling in Mammals / Geriatric Medicine Research Conference Massachusetts General Hospital / Boston, MA	
2011	Sponsoring and Conducting Research Under an IDE / Clinical Research Program Seminar Series Massachusetts General Hospital / Boston, MA	
2011	“Compelling Applications” panel / panelist discussing Continuous Glucose Monitoring and Closed-loop Blood Glucose Control, CIMIT Innovation Workshop on “Next Generation Drug Delivery, Monitoring and Adherence Systems in Chronic Disease Management” CIMIT / Boston, MA	
2011	Automated Glucose Management in Type 1 Diabetes with a Bi-hormonal Bionic Pancreas / The Center for Engineering in Medicine, Internal Seminar Series Massachusetts General Hospital / Boston, MA	
2011	Continuous Glucose Monitoring and Closed-loop Blood Glucose Control in the ICU / Pulmonary and Critical Care Division Research Conference Massachusetts General Hospital / Boston, MA	
2011	Automated Glucose Management in Type 1 Diabetes with a Bi-hormonal Bionic Pancreas / Beth Israel Deaconess Medical Center / Boston, MA	

- 2011 Continuous Glucose Monitoring and Artificial Pancreas Update / Diabetes Research Center Research Meeting
Massachusetts General Hospital / Boston, MA
- 2012 Automated Glucose Management in Type 1 Diabetes with a Bi-hormonal Bionic Pancreas / Pediatric Endocrinology conference
Massachusetts General Hospital / Boston, MA
- 2012 Automation of Blood Glucose Management in Diabetes Mellitus with a Bionic Endocrine Pancreas / Medical Grand Rounds
Massachusetts General Hospital / Boston, MA
- 2012 Continuous Glucose Monitoring and Automate Glucose Control / Diabetes Research Center Research Meeting
Massachusetts General Hospital / Boston, MA
- 2013 Medical Devices: Sponsoring and Conducting Trials Under an IDE / Design and Conduct of Clinical Trials course, Clinical Research Program
Massachusetts General Hospital / Boston, MA
- 2013 Automated Blood Glucose Management with a Bi-hormonal Bionic Pancreas / Division of Endocrinology Clinical Seminar
Boston Children's Hospital / Boston, MA
- 2014 Update on Continuous Glucose Monitoring and Automated Glycemic Regulation / Diabetes Research Center Research Meeting
Massachusetts General Hospital / Boston, MA
- 2014 Closing the Loop: Developing New Treatment for Type I Diabetes and Insights that Apply to Current Therapy / Lecture to an audience of chairs of endocrine departments in Chinese hospitals for the Harvard School of Public Health China Initiative
Harvard School of Public Health / Boston, MA
- 2014 A Bionic Endocrine Pancreas for Automated Management of Glycemia in Diabetes Mellitus / Renal Grand Rounds
Massachusetts General Hospital / Boston, MA
- 2015 Automating Glycemic Regulation with a Bionic Pancreas / Department of Medicine Leadership Council Meeting
Massachusetts General Hospital / Boston, MA
- 2015 Automating Glycemic Control in Diabetes Mellitus with a Bionic Pancreas / Medical Grand Rounds
Massachusetts General Hospital / Boston, MA
- 2017 Automating Management of Blood Glucose in Diabetes Mellitus and Related Disorders / Medical Grand Rounds – Stephen M. Krane, MD Lectureship
Massachusetts General Hospital / Boston, MA
- 2017 Automating Glucose Management In Diabetes Mellitus With a Bionic Pancreas / Medical Grand Rounds
Brigham and Women's Faulkner Hospital / Boston, MA
- 2017 Update on the Bionic Pancreas / Invited lecture to retention event for EDIC/DPPOS participants
Massachusetts General Hospital / Boston, MA
- 2018 The Senseonics Eversense Implantable CGM / Invited talk to Diabetes Center Practice Meeting
Massachusetts General Hospital / Boston, MA
- 2018 Automated Management of Glycemia with a Bionic Pancreas / Endocrine Grand Rounds
Boston Children's Hospital / Brigham and Women's Hospital, Boston, MA

Report of Regional, National and International Invited Teaching and Presentations

Those presentations below sponsored by outside entities are so noted and the sponsor(s) is (are) identified.

Regional

- 1996 Do the Protein Expression and Degradation Machineries of the Cell Share Common Components? / Biology Department Seminar
Trinity University / San Antonio, TX
- 2010 Closed-loop Blood Glucose Control for Type 1 Diabetes and Critical Illness / Endocrinology Grand Rounds
University of Massachusetts Medical Center / Worcester, MA
- 2010 On the Road to a Prosthetic Endocrine Pancreas / invited lecture (speakers chosen by Editor of Nature Medicine)
SciCafe (Nature Publishing Group) / Boston, MA
- 2011 A Bi-Hormonal Closed-Loop Artificial Pancreas for Type 1 Diabetes / Pediatric Endocrinology seminar
University of Massachusetts Medical Center / Worcester, MA
- 2011 A Bi-Hormonal Closed-Loop Artificial Pancreas for Type 1 Diabetes / Pediatric Grand Rounds
Brown University Medical School / Providence, RI
- 2011 A Bi-hormonal Bionic Pancreas for Blood Glucose Control in Type 1 Diabetes / Yale University Medical School / New Haven, CT
- 2014 A Bionic Endocrine Pancreas for Automated Management of Glycemia in Diabetes Mellitus / Grand Rounds
Emerson Hospital / Concord, MA
- 2014 A Bionic Endocrine Pancreas for Automated Management of Glycemia in Diabetes Mellitus / Medicine Grand Rounds
University of Massachusetts Medical School / Worcester, MA
- 2015 Automating Glycemic Control in Diabetes Mellitus with a Bionic Pancreas / Clinical Diabetes and Metabolism Conference
Joslin Diabetes Center / Boston, MA
- 2016 Artificial Pancreas: Too Sweet to Be True? / expert lunch session
Evercore ISI MedTools Conference / Boston, MA
- 2017 Automating Glucose Management in Diabetes Mellitus with a Bionic Pancreas / Medical Grand Rounds
St. Elizabeth's Medical Center / Boston, MA

National

- 1996 Sug1 and Sug2 Proteins, Putative Transcriptional Co-activators, Are Components of the 26S Proteasome / abstract selected for oral presentation
11th Annual M. D./ Ph. D. Student Conference / Aspen, CO
- 1997 Sug1 and Sug2: ATPase Family Components of the Yeast 26S Proteasome / abstract selected for oral presentation
Young Scientist Program, International Congress of Biochemistry and Molecular Biology / Asilomar, CA
- 1999 A Novel Approach for Selective Inactivation of AAA Proteins / abstract selected for oral presentation
Third International Conference on Cellular Functions of AAA Proteins / La Jolla, CA
- 1999 The 19S Regulatory Complex of the Proteasome Functions Independently of Proteolysis in Nucleotide Excision Repair / invited lecture
Third International Conference on Cellular Functions of AAA Proteins / La Jolla, CA
- 2000 Role of the Proteasome and the Ubiquitin-like Domain of Rad23 in Nucleotide Excision Repair / abstract selected for oral presentation
FASEB Summer Research Conference on Ubiquitin and Intracellular Protein Degradation / Saxton's River, VT
- 2004 Molecular Mechanisms of Aging in Mammals / invited lecture

- University of Texas Southwestern Medical Center Merck Scholars Symposium / Boston, MA (sponsored by Merck)
- 2007 Clinical Parameters for Closed-Loop Studies / invited lecture
Juvenile Diabetes Research Foundation Artificial Pancreas Consortium Meeting / San Francisco, CA
- 2008 Design of Closed-loop Human Studies / invited lecture
Juvenile Diabetes Research Foundation Artificial Pancreas Consortium Meeting / San Francisco, CA
- 2008 Design of Closed-loop Blood Glucose Control Trials in Human Subjects / invited lecture
Towards an Artificial Pancreas: An FDA-NIH-JDRF Workshop / Bethesda, MD
- 2008 Regulation of Stress Resistance by Insulin Signaling in Fat / invited lecture
Nathan Schock Aging Center Conference on Aging / Bandera, TX
- 2008 Validation of the Via Medical GlucoScout For Closed-loop Blood Glucose Control Trials / invited lecture
Juvenile Diabetes Research Foundation Artificial Pancreas Consortium Meeting / Washington, DC
- 2009 A Clinical Feasibility Trial of Bi-hormonal Closed-loop Blood Glucose Control for Type 1 Diabetes / abstract selected for oral presentation
American Diabetes Association Annual Scientific Session / New Orleans, LA
- 2010 The Artificial Pancreas: Closing the Loop on Insulin Delivery in the Treatment of Diabetes / invited lecturer and panelist
BIO International Convention / Chicago, IL (sponsored by Abbott Diabetes Care)
- 2010 Bi-hormonal closed-loop blood glucose control using subcutaneous infusions of insulin and glucagon / invited lecture
10th Annual Rachmiel Levine Diabetes and Obesity Symposium / Las Vegas, NV
- 2010 Key Areas of Innovation in Artificial Pancreas Development / invited lecture
Medical Device Technology Innovation Partnership (MD-TIP) Project Workshop, U.S. Food and Drug Administration, Center for Devices and Radiological Health / Bethesda, MD
- 2010 Cell Non-Autonomous Regulation of Aging by Insulin Resistant Adipose Tissue / invited lecture
Gerontological Society of America, 63rd Annual Scientific Meeting / New Orleans, LA
- 2010 Better Hormones for Fully Automated Glucose Control: Role of Glucagon / invited lecture
Diabetes Technology Meeting / Bethesda Maryland
- 2011 Artificial Pancreas Platform Panel Discussion / panelist
NIH / Juvenile Diabetes Research Foundation Artificial Pancreas Consortium Meeting (concurrent with American Diabetes Association Annual Scientific Sessions) / San Diego, CA
- 2012 Automated Management of Blood Glucose with a Closed-loop Bi-hormonal Bionic Pancreas / Invited lecture
Phacilitate Autoimmune and Inflammation Leaders' Forum (Workshop – Picking the Winning Modalities in the Race to Address Type 1 Diabetes) / San Francisco, CA
- 2012 Automated glucose management in type 1 diabetes with a bi-hormonal bionic pancreas / Invited lecture
Pediatric Endocrine Society Annual Meeting / Boston, MA
- 2012 A Bionic Pancreas Delivering Insulin and Microdose Glucagon Automates Blood Glucose Control in Type 1 Diabetes / Invited lecture
American Diabetes Association Annual Scientific Session / Philadelphia, PA
- 2012 A Comparative Analysis of Three Continuous Glucose Monitors: Not All Are Created Equal / Abstract selected for oral presentation
American Diabetes Association Annual Scientific Session / Philadelphia, PA
- 2012 A Bionic Pancreas Delivering Insulin and Microdose Glucagon Automates Blood Glucose Control in Type 1 Diabetes / Invited lecture (co-presented with Ed Damiano)
Lilly & Co / Indianapolis, IN

- 2012 Automated Glucose Control with a Bi-hormonal Bionic (Artificial) Pancreas in Children and Adults with Type 1 Diabetes / Invited lecture - Sumner J. Yaffe Memorial Lecture Series in Pediatric Clinical Pharmacology
Webinar sponsored by the Eunice Kennedy Shriver National Institute of Child Health and Human Development
- 2013 Automated Blood Glucose Control with a Bi-hormonal Bionic Pancreas / Invited lecture
University of North Carolina School of Medicine, Endocrinology and Metabolism Research Conference / Chapel Hill, North Carolina
- 2013 Automatic Blood Glucose Control with a Bi-hormonal Bionic Pancreas / Keynote lecture
JDRF 6th Annual 'Diabetes Today and Tomorrow' Conference / Belleville, MI
- 2013 Real World Insights / Panelist
T1D Exchange Annual Meeting: What Does it Take to Get Therapies and Devices to Market? / Boston, MA
- 2013 A Robustly Adaptive Bi-Hormonal Bionic Pancreas for Automated Glucose Control in Children and Adults / Abstract selected for oral presentation
American Diabetes Association Annual Scientific Session / Chicago, IL
- 2013 A Comparative Analysis of Three Continuous Glucose Monitors / Abstract selected for oral presentation
American Diabetes Association Annual Scientific Session / Chicago, IL
- 2013 Standardization of Trial Reporting / Panelist
JDRF/NIH Closed-Loop Research Meeting (concurrent with American Diabetes Association Annual Scientific Sessions) / Chicago, IL
- 2013 A Bionic Pancreas in the Wild: The Beacon Hill and Summer Camp Studies / Keynote presentation
14th North American Conference on Diabetes and Exercise "New Frontiers in Diabetes and Sport" / San Diego, CA (sponsored by Tandem Diabetes Care)
- 2014 A Bionic Pancreas in the Wild: Outpatient Studies / Invited lecture
14th Annual Rachmiel Levine Diabetes and Obesity Symposium / Pasadena, CA
- 2014 Why Endocrinology? Themes of a Career Journey / Keynote lecture
Close Concerns Alumni Summit / Aspen, CO
- 2014 Outpatient Glycemic Control in Type 1 Diabetes with a Bihormonal Bionic Pancreas / Eli Lilly Grand Rounds
Lilly & Co./ Indianapolis, IN (sponsored by Eli Lilly)
- 2014 Automated Glycemic Control In Diabetes with a Bihormonal Bionic Pancreas / Invited lecture
Celebrating Chemistry at Trinity – Research Symposium, Trinity University / San Antonio, TX
- 2014 Multiday Outpatient Glycemic Control in Adolescents with Type 1 Diabetes Using a Bihormonal Bionic Pancreas: The Barton Center Summer Camp Study / Abstract selected for oral presentation
74th Annual American Diabetes Association Scientific Sessions / San Francisco, CA
- 2014 Outpatient Glycemic Control in Type 1 Diabetes with a Bihormonal Bionic Pancreas / Invited lecture
Clinical Application of Real-Time CGM: Professional Use, Pediatrics and the Pathway to the Artificial Pancreas (Corporate Symposium held during the 74th Annual American Diabetes Association Scientific Sessions) / San Francisco, CA (sponsored by Dexcom)
- 2014 Managing Hyperglycemia on the Ward and in the ICU: Challenges, Controversy, and New Technology / Invited lectures X2 (Meet the Professor sessions)
Endocrine Society Diabetes Diagnosis and Management workshop / Chicago, IL
- 2014 Artificial and Bionic Pancreas Technology / Invited lecture
Endocrine Society Diabetes Diagnosis and Management workshop / Chicago, IL
- 2014 Multiday Outpatient Glycemic Control in Adults with Type 1 Diabetes Using a Bihormonal Bionic Pancreas: The Beacon Hill Study / Abstract selected for oral presentation

- ICE/ENDO 2014 (International Congress of Endocrinology / Endocrine Society's 96th Annual Meeting) / Chicago, IL
- 2014 A Bionic Endocrine Pancreas for Automated Management of Glycemia in Diabetes Mellitus / Paul B. Beeson graduating scholar presentation
The Paul B. Beeson Career Development Awards in Aging Research Program Annual Meeting / San Diego, CA
- 2014 Artificial vs. Bionic Pancreas / Invited lecture
1st Cleveland Clinic Beta Cell Therapy Symposium: Advances in the Management of Diabetes (organized by the Cleveland Clinic) / Cleveland, OH
- 2015 Automated Control of Glycemia in Type 1 Diabetes with a Bionic Endocrine Pancreas / Invited lecture
Weekly Seminar Series on Diabetes, Obesity & Metabolism / UT Southwestern Medical Center, Dallas, TX
- 2015 Automated Control of Glycemia in Type 1 Diabetes with a Bionic Endocrine Pancreas / Endocrinology Grand Rounds
Department of Internal Medicine, UT Southwestern Medical Center / Dallas, TX
- 2015 Diabetes Devices and Management Tools / Panelist, along with Howard Wolpert and Gary Scheiner
Cowen and Company 35th Annual Health Care Conference / Boston, MA
- 2015 Automating Glycemic Regulation with a Bionic Pancreas / Invited plenary lecture
Diabetes Diagnosis & Management, ENDO 2015 (97th Annual Meeting of the Endocrine Society) / San Diego, CA
- 2015 Autonomous and Continuous Adaptation of a Bihormonal Bionic Pancreas in Adults and Adolescents with Type 1 Diabetes / Invited lecture
The Best of JCEM 2014 – Symposium in which the 10 papers with the best reviewer scores in their respective areas for 2014 were presented - our paper was chosen as the best in Diabetes, ENDO 2015 (Endocrine Society's 97th Annual Meeting) / San Diego, CA
- 2015 Bionic Pancreas: Getting Closer (with Yash Sabharwal, Chief Operating Officer, Xeris Pharmaceuticals) / session selected by the SXSW PanelPicker process
SXSW Interactive (Health and MedTech) / Austin, TX (notably NOT sponsored by Xeris Pharmaceuticals)
- 2015 Insulin pumps and sensors: How close are we to an external pancreas? / Invited lecture
Diabetes for the Internist (Pre-Course prior to the American College of Physicians Internal Medicine Meeting 2015) / Boston, MA
- 2015 High-stakes Quantified Self: Devices and Tools for Diabetes Management / Invited lecture
GTCbio Diabetes Summit 2015 / Boston, MA
- 2015 Automating Glycemic Control in Diabetes Mellitus with a Bionic Pancreas / Jean D. Wilson Distinguished Alumnus Lecture
University of Texas Southwestern Medical Center Medical Scientist Training Program Retreat 2015 / Pottsboro, TX
- 2015 New Technologies: Tools in Research / Invited lecture
American Diabetes Association Focus on Fellows, pre-meeting to the 2015 ADA Annual Scientific Sessions / Boston, MA
- 2015 Bionic Pancreas Pivotal Trial / invited speaker and panelist
Large Efficacy Studies for Artificial Pancreas Systems section, JDRF/NIH Artificial Pancreas Dinner Meeting (associated with the 2015 ADA Scientific Sessions) / Boston, MA
- 2015 Outpatient Glycemic Control with a Bionic Pancreas in Pre-adolescents with Type 1 Diabetes / Abstract selected for oral presentation
American Diabetes Association Annual Scientific Sessions 2015 / Boston, MA
- 2015 A Bionic Pancreas: Automating Diabetes Care / Invited lecture
Fidelity Senior Leadership Forum (audience of the top 250 Fidelity executives, TED Conference format) / Boston, MA
- 2015 Automating Glycemic Control in Diabetes Mellitus with a Bionic Pancreas / Plenary lecture
American Association of Diabetes Educators 15th Annual Meeting / New Orleans, LA

- 2015 Automating Glycemic Control in Diabetes Mellitus with a Bionic Pancreas / Invited lecture
Sanofi Diabetes Education Summit (national meeting of Sanofi medical liaison staff) /
Bridgewater, NJ
- 2015 A Bionic Pancreas – Automating Diabetes Care / Invited plenary lecture
American Academy of Pediatrics 2015 National Conference & Exhibition / Washington, DC
- 2015 Automating Glycemic Control in Diabetes Mellitus with a Bionic Pancreas / Medical Grand
Rounds
Department of Internal Medicine, Henry Ford Hospital / Detroit, MI
- 2015 Automating Glycemic Regulation in T1D with a Bionic Pancreas / Invited lecture
17th Annual Columbia University College of Physicians and Surgeons Naomi Berrie
Diabetes Center Frontiers in Diabetes Research Conference: *Can Diabetes Be Cured?* /
New York, NY
- 2016 Automating Glycemic Control in Diabetes Mellitus with a Bionic Pancreas / Invited lecture
Scripps Diabetes Care and Prevention – Scripps Memorial Hospital / La Jolla, CA
- 2016 Automating Glycemic Management in Diabetes Mellitus with a Bionic Pancreas / Invited
lecture
Annual Meeting of the Endocrine Nursing Society / Boston, MA
- 2016 Automating Glycemic Management in Diabetes Mellitus with a Bionic Pancreas / Invited
lecture
ENDO 2016 (98th Annual Meeting of the Endocrine Society) / Boston, MA
- 2016 Broadening the Use of Research Technologies / Invited lecture
American Diabetes Association Focus on Fellows, pre-meeting to the 2016 ADA Annual
Scientific Sessions / New Orleans, LA
- 2016 Design Considerations for Artificial Pancreas Pivotal Studies / Invited lecture
JDRF/NIH Closed-Loop Consortium Meeting (associated with the 2016 ADA Scientific
Sessions) / New Orleans, LA
- 2016 Dual/Multi-hormone Artificial Pancreas Systems / Invited lecture
Fourth Artificial Pancreas Workshop: Testing and Adoption of Current and Emerging
Technologies / Bethesda, MD
- 2016 Bionic Pancreas / Invited lecture
World Diabetes Day – Greenville Health Systems / Greenville, SC
- 2017 Automating Glycemic Management in Diabetes Mellitus / Invited lecture
Clinical Pharmacology Distinguished Speaker series, Health University of Utah Department
of Pharmacology Department / Salt Lake City, UT
- 2017 Automating Glycemic Management in Diabetes Mellitus /
Health University of Utah / Salt Lake City, UT
- 2017 Advances in Automation of Glucose Management in Diabetes Mellitus / Invited lecture
GTCbio Diabetes Summit 2017 / Boston, MA
- 2017 Automating Glucose Management in Diabetes Mellitus with a Bionic Pancreas / Department
of Medicine Grand Rounds
University of Pittsburgh / Pittsburgh, PA
- 2017 Automating Glucose Management in Diabetes Mellitus with a Bionic Pancreas / Invited
special lecture to adult and pediatric endocrine faculty
University of Pittsburgh / Pittsburgh, PA
- 2017 Exercise and Dietary Management—Implications for Artificial Pancreas
Systems / Invited lecture
2017 ADA Annual Scientific Sessions / San Diego, CA
- 2017 Automating Glucose Control with a Bionic Pancreas / Invited lecture
2017 Congenital Hyperinsulinism Family Conference / Galloway, NJ
- 2017 Zilretta in Patients with Type 2 Diabetes / Invited lecture
Flexion Therapeutics Analyst Day / New York, NY
- 2017 Progress Toward Closed Loop Insulin Delivery / Invited lectures X 2 (Meet the Professor
sessions)
Endocrine Society Clinical Endocrinology Update 2017 / Chicago, IL

- 2017 Closed-Loop Systems for Diabetes Management / Invited lecture
44th Annual Washington University Kilo Diabetes Symposium 2017 / St. Louis, MO
- 2018 The Future of Insulin Delivery: The Artificial Pancreas / Keynote Presentation
onset 5 (NN118-3854) Results Meeting / Miami, FL (sponsored by Novo Nordisk)
- 2018 Update on Automated Glucose Control with the Bionic Pancreas / Invited lecture
GTCbio 11th Diabetes Summit / Boston, MA
- 2018 The future of insulin delivery: artificial pancreas / Department of Medicine Grand Rounds
(first annual Grand Rounds sponsored by the ABIM Research Pathway residency program)
University of North Carolina School of Medicine / Chapel Hill, NC
- 2018 The bionic pancreas: Is it ready for prime time? / Invited lecture
Harvard Diabetes Update 2018 (CME program with national and international attendees) /
Boston, MA
- 2018 Automated management of glycemia with a bionic pancreas / Department of Medicine
Grand Rounds
University of Virginia Health System / Charlottesville, VA
- 2019 Automated Glucose Management with the Bionic Pancreas / Department of Pediatrics
Grand Rounds
University of Texas Health Science Center / San Antonio, TX

International

- 1997 Isolation and Characterization of Sug2, a Novel ATPase Family Component of the Yeast
26S Proteasome / invited lecture
EMBO Workshop on Cellular Functions of AAA Proteins / Tutzing, Germany
- 2010 Diabetes, Thyroid Disease, and Osteoporosis / invited lecturer
International Medical Corps CME course for displaced Iraqi physicians / Amman, Jordan
- 2010 A Bi-Hormonal Closed-Loop Artificial Pancreas for Type 1 Diabetes / invited lecture
Sanofi Aventis / Frankfurt, Germany
- 2012 Automated Management of Blood Glucose in Type 1 Diabetes with a Bi-hormonal Bionic
Pancreas / invited lecture
Bringing the Artificial Pancreas Home (AP@home) meeting / Barcelona, Spain
- 2012 Automated Management of Blood Glucose in Type 1 Diabetes with a Bihormonal Bionic
Pancreas / abstract selected for oral presentation
5th International Conference on Advanced Technologies & Treatments for Diabetes
meeting / Barcelona, Spain
- 2013 Progress Towards Automated Glucose Control in Type 1 Diabetes with a Bi-hormonal
Bionic Endocrine Pancreas / invited lecture
6th Accu-Chek Network Meeting / Riga, Latvia (sponsored by Roche)
- 2013 Clinical Experience with a Bihormonal Bionic Endocrine Pancreas / invited lecture
Danish Diabetes Academy Diabetes and Technology Meeting / Copenhagen, Denmark
- 2013 Accuracy, Precision, and Reliability of Continuous Glucose Monitors / invited lecture
Diabetes and Technology Meeting (Danish Diabetes Academy) / Copenhagen, Denmark
- 2013 Challenges in the Development and Testing of Bihormonal Bionic Pancreas / invited
lecture
Danish Diabetes Academy Workshop, Hvidovre Hospital / Copenhagen, Denmark
- 2014 Automated Control of Blood Glucose with a Bionic Pancreas / invited lecture
JDRF Canada 2014 Diabetes Research Infosium / Toronto, Canada
- 2014 The Artificial and Bionic Pancreas: Update on Where We Are Today / invited lecture to the
International Forum for the Advancement of Diabetes Research and Care / Berlin,
Germany (sponsored by Sanofi Aventis)
- 2014 A Bionic Endocrine Pancreas for Automated Management of Glycemia in Diabetes Mellitus
/ Invited webinar
Mercodia Webinars at www.mercodia.se / Uppsala, Sweden (attendees from 10 countries)

- 2014 An Overview of Advancements in Artificial Pancreas / Invited lecture
First Oman Diabetes Summit / Muscat, Oman
- 2014 Management of Inpatient Hyperglycemia / Invited lecture
First Oman Diabetes Summit / Muscat, Oman
- 2014 Diabetes Technology / Invited lecture
National Center for Diabetes and Endocrinology / Muscat, Oman
- 2014 Inpatient Management of Diabetes / Invited lecture
Second International Conference on Endocrinology and Diabetes / Riyadh, Kingdom of Saudi Arabia
- 2014 Technology and Diabetes / Meet the Professor session
Second International Conference on Endocrinology and Diabetes / Riyadh, Kingdom of Saudi Arabia
- 2014 Artificial Pancreas: State of the Art / Plenary Lecture
Second International Conference on Endocrinology and Diabetes / Riyadh, Kingdom of Saudi Arabia
- 2015 The Bionic Pancreas – When Will the Dream Come True? / Invited lecture
European Association for the Study of Diabetes (EASD) Diabetes Technology Meeting / Dusseldorf, Germany
- 2015 Automating Glycemic Control in Diabetes Mellitus
With a Bionic Pancreas / Invited lecture
State of the Art Management of the the Adult with Type1 Diabetes - The 4th Annual Charles H. Best Diabetes Centre Continuing Health Education Day / Toronto, Ontario, Canada
- 2015 The Bionic Pancreas: When Will the Dream Come True? / Invited lecture, EASD/ADA Symposium: Devices
European Association for the Study of Diabetes 51st Annual Meeting / Stockholm, Sweden
- 2015 Outpatient Glycemic Control with a Bionic Pancreas in Type 1 Diabetes / Invited lecture
Endopäivät (EndoDays) 2015 - 68th Annual Meeting of the Finnish Endocrine Society / Helsinki, Finland
- 2015 Diabetes Technology: Towards Automated Glucose Management / invited lecture
Endocrine Society Dimensions in Diabetes / Chennai, India
- 2016 Dual-hormone Is the Way To Go / invited lecture (part of session called Parallel Debate on Single vs. Dual-Hormone Closed-loop, with the other lecture being Insulin-only Systems Is the Way To Go)
9th International Conference on Advanced Technologies and Treatments for Diabetes / Milan, Italy
- 2016 Automating Glycemic Management in Diabetes Mellitus with a Bionic Pancreas
Current Trends in Pediatric Endocrinology: A PES Perspective / Istanbul, Turkey
- 2016 Dual Hormone Is the Way to Go: Reprised and expanded from the ATTD 2016 debate / invited lecture
Zealand Pharma AS / Copenhagen, Denmark
- 2016 The Bionic Pancreas / invited plenary lecture
European Congress of Endocrinology / Munich, Germany
- 2016 Home use of a bihormonal bionic pancreas vs conventional insulin pump therapy in adults with type 1 diabetes: a multicenter randomized clinical trial / abstract selected for oral presentation
European Association for the Study of Diabetes 52nd Annual Meeting / Munich, Germany
- 2016 Bihormonal Artificial Pancreas / invited lecture
Appropriatezza in Diabetologia: la lezione dei grandi trials, meeting of the Societa Italiana di Diabetologia / Parma, Italy
- 2017 Tek Hormon mu, Cift Hormon mu? Biyonik Pankreas (Single or Dual Hormone? Bionic Pancreas) / invited lecture
1. Diyabet Teknolojileri Sempozyumu – 1st National Diabetes Technology Symposium / Izmir, Turkey

- 2017 The Bionic Pancreas / Invited plenary lecture
Annual Meeting of the Dutch Endocrine Society / Noordwijkerhout, Netherlands
- 2017 Automated Glycemic Regulation with a Bionic Pancreas Delivering Insulin and Glucagon – the Boston Approach / Invited lecture
The 10th International Conference on Advanced Technologies and Treatments for Diabetes / Paris, France
- 2017 Automated Control of Glycaemia with a Bihormonal Bionic Pancreas / Invited lecture
Diabetes UK Professional Conference / Manchester, United Kingdom
- 2017 Advancements in Technology for Diabetes Management / Invited lectures X2 (Meet the Expert Sessions)
Global Diabetes Summit / Rio de Janeiro, Brazil (sponsored by Novo Nordisk)
- 2017 Automatic Regulation of Glycemia with a Bionic Pancreas / Invited lecture
Seoul International Conference of Endocrinology and Metabolism / Seoul, South Korea
- 2017 Advancements in Technology for Diabetes Management / Invited lectures X 2 (Meet the Expert Sessions)
Global Diabetes Summit / Madrid, Spain (sponsored by Novo Nordisk) – two trips, each with 2 of the same lectures
- 2017 Technology for the Treatment of Diabetes / invited lecture
Third Affiliated Hospital of Nanchang University / Nanchang, China
- 2017 Novel Therapy in DM Type 1 / invited lecture
Second Qatar International Endocrinology Conference 2017 / Doha, Qatar
- 2017 Bionic Pancreas / invited lecture
Second Qatar International Endocrinology Conference 2017 / Doha, Qatar
- 2017 The Eversense Implantable CGM System / invited lecture
International Diabetes Foundation Symposium 2017 / Abu Dhabi, United Arab Emirates (sponsored by Roche – competing CGM systems were also described along with comparative accuracy data from a study sponsored by the Helmsley Charitable Trust; the sponsor had no role in determining the content of the presentation)
- 2018 Bionic Pancreas Treats Adults with Type 1 Diabetes / Invited lecture
Advanced Technology for the Treatment of Diabetes (ATTD) 2018 / Vienna, Austria
- 2018 The Importance of Accurate BGM for Artificial Pancreas / Invited lecture
Advanced Technology for the Treatment of Diabetes (ATTD) 2018 / Vienna, Austria (sponsored by Ascensia)
- 2018 State of the Art in Continuous Glucose Monitoring / Invited lecture
Press event associated with Advanced Technology for the Treatment of Diabetes (ATTD) 2018 / Vienna, Austria (sponsored by Roche – competing CGM systems were also described along with comparative accuracy data from a study sponsored by the Helmsley Charitable Trust; the sponsor had no role in determining the content of the presentation)
- 2018 The Stable Glucagon Analog Dasiglucagon Is Well-Tolerated and as Effective as Recombinant Human Glucagon When Delivered By the Bionic Pancreas In Response To Insulin Excess / abstract selected for oral presentation
Advanced Technology for the Treatment of Diabetes (ATTD) 2018 / Vienna, Austria
- 2018 Dr. Joseph Black Lecture: Automated management of glycaemia with a bionic pancreas / Invited lecture
Royal College Physicians of Edinburgh Symposium: Diabetes and Endocrinology / Edinburgh, Scotland
- 2019 The Role of Bionic Pancreas in Exercise Management / Keynote lecture
15th Portuguese Congress of Diabetes / Vilamoura, Portugal

Report of Clinical Activities and Innovations

Current Licensure and Certification:

2004- Massachusetts Medical License

- 2004-14 Diplomate, American Board of Internal Medicine – Internal Medicine (allowed to lapse in 2014)
- 2006- Diplomate, American Board of Internal Medicine – Endocrinology, Diabetes, and Metabolism (certified until 2027)

Practice Activities:

2006-07	Ambulatory neuroendocrine care	Neuroendocrinology Massachusetts General Hospital	2 sessions per month
2006-14	Ambulatory diabetes care	Massachusetts General Hospital	2 session per month
2014-	Ambulatory diabetes care	Massachusetts General Hospital	1 session per week
2006-	Inpatient consults	Massachusetts General Hospital	~8 weekend per year

Clinical Innovations:

- Data driven choice of CGM technology My team performed the first head-head-head comparative effectiveness of all commercially available continuous glucose monitor (CGM) devices, allowing data driven recommendations to patients based on accuracy and reliability performance. This has changed practice in our MGH diabetes units (adult and pediatric) when prescribing CGM monitoring and when interpreting data collected by patients. These data have also been presented widely and have helped to motivate more work on improved glucose sensors by medical device companies. We have now tested three generations of sensors, reported in two publications, and continue to test new technologies as they near clinical use. We recently tested an implantable CGM and a CGM that requires no calibrations against the only CGM that is approved as a fingerstick replacement, the Dexcom G5, in an outpatient study.

- Data driven choice of point-of-care glucose meters We performed and published a head-to-head study of the accuracy of 17 commonly used point-of-care glucose meters and found that the accuracy varies widely between devices, with average errors as low as 6% for the best devices and 20% for the worst performing devices. This study includes more meters in a single study than any other of which we are aware. The results of this study have affected clinical practice at our center as well as others.

Report of Technological and Other Scientific Innovations

- Bi-hormonal automated BG control in type 1 diabetes I have collaborated with engineering colleagues since 2006 on development, optimization, and clinical testing of closed-loop blood glucose (BG) technology utilizing both insulin and glucagon. This bi-hormonal closed-loop glucose control approach provides more effective BG control than is possible with insulin-only approaches. We were the first in the world to complete an outpatient trial of automated glucose control during the day and nighttime (other groups had completed nighttime only trials). We have now completed five outpatient, day-and-night trials in adults and adolescents, including the first outpatient trials in pre-adolescent children and the first home-use trials in adults. The results make clear that this device will dramatically change the way type 1 diabetes is managed. I am listed as an inventor on the following published US patents and patent applications on aspects of the bionic

pancreas (U.S. Patent Nos. 9,833,570 and 10,188,795, U.S. Patent Application: 20180220942). Two of my engineering collaborators have formed a company, Beta Bionics, to commercialize this technology. I did not co-found the company because it would have meant ending my research on this topic in the academic environment due to conflict of interest rules. However, I do advise the company on the continue development and testing of the technology and I will be directing the pivotal trials of the bionic pancreas. We are targeting FDA approval in 2020 and commercialization shortly thereafter.

Automated delivery of micro-dose glucagon for hypoglycemia prevention and treatment

We have performed a home-use, double-blinded, randomized study of configuration of the bionic pancreas system that automatically delivers glucagon to prevent hypoglycemia. Subjects manage their own insulin delivery. The amount of glucagon delivered was very similar to that delivered by the bi-hormonal bionic pancreas in our home use study. This study showed that micro-dose glucagon is highly effective for hypoglycemia prevention. One of the most interesting findings from this study was that when glucagon was delivered in a blinded fashion participants were not able to guess when they were delivering it and reported no more nausea on days when they received glucagon than when they did not. A manuscript describing these data will be submitted soon.

Characterized rapid-acting insulin pharmacokinetics

In the course of closed-loop BG control studies we found that the pharmacokinetic (PK) behavior of insulin lispro varied much more between individuals, and across a wider range, than expected based on published data describing populations of patients. In some patients, insulin lispro was absorbed even more slowly than regular human insulin. This has led to modification of insulin-on-board parameters programmed into patient pumps and an increased awareness of the potential role of insulin PK in failure to achieve glycemic goals and development of hypoglycemia among patients in the adult and pediatric diabetes practices at MGH. In addition, it motivated a study to test whether there are differences between the PK characteristics of different rapid-acting insulin analogs within single individuals. In order to do this I developed a novel method to perform multiplexed PK analysis of multiple rapid-acting insulin analogs in a single visit using novel, analog-specific insulin assays that we have developed for this purpose. A patent application on the novel insulin assays is nearing submission. The study showed that in most individuals two commonly used rapid-acting insulin are comparable, but that in ~20% of study population one of these insulins was consistently absorbed faster than the other. This presents the opportunity for personalizing insulin analog choice to improve glycemic control. A paper is in preparation.

Validation of CGM technology for the ICU environment

We have performed a clinical trial demonstrating that a continuous glucose monitor is as accurate in the ICU as in the outpatient environment when calibrated more frequently than in the outpatient environment (e.g. every 6 hours). A manuscript is in preparation. This finding has not, as yet, led to usage of CGM in MGH ICUs, because the CGM that was used in the study was withdrawn from the US market for business reasons. However, this finding may pave the way to improved safety and efficacy of tight glycemic control in the ICU, in particular through the use of CGM as the input limb to a

closed-loop BG control device because the CGM technology that was tested may be returning to the US market soon.

Closed-loop blood glucose control in critical illness

I have guided adaption by engineering collaborators of closed-loop technology developed for use in type 1 diabetes to use in the critical care setting. We have completed a clinical trial of closed-loop device using CGM sensing and automated IV insulin and dextrose dosing. The system provided a very tight clamp on glucose levels in both subjects with type 1 and type 2 diabetes. These data are now being prepared for publication. A validated device for automated BG control in the ICU will be critical for finally performing a definitive test of the hypothesis that tight glycemic control can reduce mortality and morbidity in critically ill patients, which has been the subject of much controversy.

Evaluation of intradermal insulin delivery for improvement of insulin and glucagon pharmacokinetics

Preliminary studies by other investigators have suggested that intradermal delivery of insulin can significantly improve its pharmacokinetics. We performed a study using a proprietary microneedle technology developed in Israel. The data show that intradermal delivery speeds the absorption of insulin, and that the benefit is greatest for participants with slower absorption of insulin from the subcutaneous tissues. In the same study, we tested whether intradermal delivery improved the pharmacokinetics of glucagon and found that it did not. We collaborated with a pharmacology group for the analysis of this study and the paper is nearing submission.

Continuous insulin monitoring

The pharmacokinetics of insulin is an important determinant of success for closed-loop control. Unfortunately, the PK characteristics of rapid acting insulins vary greatly between individuals and to a lesser degree within an individual from infusion site to infusion site. Setting the parameters of a closed-loop bionic pancreas such that slow insulin absorption is assumed avoids insulin stacking but leads to loss of peak performance. In collaboration with engineering colleagues (distinct from those involved in the bionic pancreas project) I am developing a device that assays the levels of insulin in microdialysis fluid obtained continuously from the subcutaneous space. We have now published results showing the feasibility of the device in vitro. We have also performed animal studies and preliminary studies in humans showing that we can detect insulin in the interstitial fluid, both basal levels and peaks after subcutaneous delivery of the rapid-acting insulin lispro.

Validation of novel, stable glucagon formulations and analogs

We have performed a hyperinsulinemic normoglycemic clamp study to compare the pharmacodynamics and pharmacokinetic properties of a stable formulation of glucagon (Xeris Pharmaceuticals) with freshly reconstituted glucagon (Eli Lilly) that is known to be unstable after reconstitution. A stable formulation of glucagon is critical to the development of a bionic pancreas. This study is investigator initiated, foundation funded, and I am the sponsor of the IND. The study is complete, and the data are being analyzed. We are currently performing a separate study to test the equivalence of a stable glucagon analog (produced by Zealand Pharma) with Lilly glucagon. We are currently planning trials of a glucagon formulation (produced by Adocia Pharma) and a new glucagon analog from Eli Lilly.

Evaluation of the effects of ethanol intoxication on the

Ethanol intoxication is associated with an increased risk of hypoglycemia in patients with type 1 diabetes, and ethanol is known to inhibit gluconeogenesis. We have performed hyperinsulinemic normoglycemic clamp study in which each participant was clamped twice, once while ethanol

antihypoglycemic action of glucagon

intoxicated (blood alcohol content clamped at 0.1% using a computer-controlled infusion of ethanol) and once in the absence of ethanol. We delivered the same dose of glucagon during each clamp and compared the area over the curve of the glucose infusion rate. We found that there was no statistically significant difference in the anti-hypoglycemic action of glucagon in the presence or absence of ethanol intoxication. These data are currently being prepared for publication.

Use of CGM technology to evaluate the effects of a novel sustained release intra-articular steroid on glycemic management in patients with type 2 diabetes

Approximately 30% of patients with type 2 diabetes mellitus have knee osteoarthritis. Intra-articular corticosteroids used to manage osteoarthritis pain can elevate blood glucose in these patients. We used CGM to compare BG levels following intra-articular injection of FX006, an extended-release, microsphere-based triamcinolone acetonide (TA) formulation, versus standard TA crystalline suspension (TAcS) in diabetic patients with knee osteoarthritis. We found that administration of FX006 caused no statistically significant change in BG control whereas TAcS caused significant hyperglycemia over 72 hours after injection. This may allow treatment of knee osteoarthritis in patients with diabetes without disruption of glucose control.

Report of Education of Patients and Service to the Community

Narrative Report

My research effort is focused on translational and clinical investigation. Its most important contribution has been the development and clinical testing of a system for automated glycemic management in patients with type 1 diabetes, a bionic pancreas. I spend 85% of my time on research, 10% on clinical care, and 5% on teaching.

In collaboration with Dr. Edward Damiano, a Biomedical Engineer at Boston University, we have developed and validated a bionic pancreas that automatically delivers both insulin and micro-doses of glucagon to regulate blood glucose. The collaboration began in 2006, and after initial inpatient studies (4 publications) we progressed to the first ever day-and-night outpatient studies of automated glycemic regulation in adults and adolescents. These studies, published in the *NEJM* in 2014, demonstrated the bionic pancreas to be superior to self-management with an insulin pump in reducing both mean glucose and hypoglycemia simultaneously. We next completed an outpatient study in pre-adolescent children in fall of 2014 (published in *The Lancet*, *Diabetes and Endocrinology* in 2016) and in May 2015 we completed a multi-center home use study, the first of its kind, wherein each subject went about their normal routine for 11 days in both arms in (published in *The Lancet* in 2016). Both studies showed statistically and clinically significant reductions in mean glucose and the incidence of hypoglycemia. A fully integrated bionic product (not the prototypes used to date) began its first human test in December 2017. In collaboration with the FDA, we designed a pivotal study that will provide the data necessary for FDA approval. In 2016, we received funds (~\$12M) to support the

pivotal trials. A company, $\beta\alpha$ β ionics, has been founded to commercialize the bionic pancreas and has raised > \$150M in capital. I has produced a commercial version of the bionic pancreas, called the iLet. Once testing is complete manufacturing to scale will begin to produce the units to be used in the pivotal trial, which will begin in the second quarter of 2020.

We recently completed a study on a glucagon-only version of the bionic pancreas (manuscript in preparation) and a study testing the effect of manipulating the glucose target on the performance of the bionic pancreas. I have applied for funding to test the bionic pancreas in patients with insulin-dependent type 2 diabetes, in older adults with type 1 and type 2 diabetes, and in people with type 1 diabetes who have no prior experience with diabetes technology (pump and sensor naïve).

My contributions to the development of the bionic pancreas algorithms have led to a patent (US 9833570 B2, inventors: El-Khatib, Damiano, Russell) and several patents pending, with the portfolio licensed to $\beta\alpha$ β ionics by Partners HealthCare Innovation.

I am also working in related areas, including comparative evaluation of glucose sensing and measurement technologies (manuscript on glucose meter accuracy submitted), development and testing of a system for automated glycemic regulation in the inpatient setting (study completed, manuscript in preparation), evaluation of a stabilized form of glucagon in a clamp study (study completed, manuscript in preparation), development of assays specific for individual insulin analogs (manuscript in preparation) comparative evaluation of the PK of different insulin analogs in a single individual (manuscript in preparation), development of a system for continuous measurement of interstitial insulin levels using microdialysis and a microfluidic immunoassay (two published manuscript), and evaluation of the effect of ethanol intoxication on the anti-hypoglycemic activity of glucagon (manuscript in preparation).

I actively participate in academic activities such as grant and manuscript review, serve on a number of advisory boards (e.g. for the California Institute of Regenerative Medicine, Glu/T1D Exchange, Lancet Diabetes and Endocrinology, diaTribe/diabetes CloseUp/CloserLook), mentor fellows, mentor a graduate student the area of diabetes technology (dissertation has been submitted), and teach medical students (lectures to the Harvard/MIT HST program), medical residents in the Internal Medicine residency program (lectures to the Tools of Human Investigation course), and medical residents and endocrine fellows in my role as Visit on the Endocrine consult service. I speak nationally and internationally about automated glucose management and related issues. I consult for a number of companies on clinical trial design, diabetes technology, and strategic questions in the diabetes care space.

My work has established me as an expert in the clinical investigation of automated glycemic regulation nationally and internationally and I have developed a portfolio of funded projects focused on improving the care of diabetes patients through the innovative use of technology.
