The management?

Learning

An example: our
OCD project

Finally, a few postulates
we need to think about
in today's emerging technology
environment

The task of pedagogy is to develop the
human potential inherent in every child.
Children's development should begin
at the earliest stage of life. In the absence of this, the
environment can be the dominant shaping force.
Children must be made aware of
the fullness of human culture.
The teacher must be a creative person
to perform his / her assisting function.
The development of human potential requires a
creative and supportive pedagogical environment.

Thank you for your attention!
