*Sessions 1,3,6 will meet @Maple Hill Farm, Hallowell

This six-session course will cover essential topics for emerging or new public health managers to be effective in today's public health environment. The program includes three full day in-person sessions and three 60 minute webinars.

Participants will learn skills, tools and strategies that will help them effectively hire and lead high-performance teams and manage public health programs.

This training is intended for individuals in city or state public health agencies or the broader public health system who are:

- +New and emerging managers; or
- +Current managers interested in new tools for persistent management challenges; and
- +Have few management training opportunities or find themselves in management positions with limited training or experience.

There is no cost to this training, but participants are expected to attend all sessions. To apply for the management training series, follow this link:

OBJECTIVES

Upon completing the training series, participants will:

- +Better understand how to manage differently in today's environment;
- +Describe new information, tools, and resources to manage more effectively; and
- +Demonstrate enriched skills to better manage specific aspects of public health workforce and environment.
