## PREPAREDNESS CONTENT AREA UPDATE Region 1

---

thi Traugh, Yale School of Public Health  
h Eckhouse, Boston University School of Public Health

March 15, 2018

# Emergency Preparedness Training Certificate

- Bundle of 16 individual trainings
- All are on-line/ asynchronous, taken at own pace
- Once all trainings completed, candidates take culminating exam to receive certificate

<http://www.nephtc.org/enrol/index.php?id=39>

# HICS for Community Health Centers

- Developed with state primary care associations
- Uses team project-based learning approach
- Boston's Office of Public Health Preparedness provides instructors
- CHCs can receive expert coaching and have emergency plan updates as learning outcomes
- Web-based but provides experiential learning

**“CHCs are beginning to join regional response coalitions, so ICS helps them be more prepared to participate. Without that base of knowledge, they are totally unprepared to be a response entity.”**

**Operations Manager, Community Health Center Association of Connecticut (CHCACT)**

# Puerto Rico Response

**Deconstructing Online Content for Puerto Rico Post-Hurricane Maria:**  
**Rapid Response Public Health Campaign by PHTCs**  
 Todd, Karla, MBA, MSM, Boston University School of Public Health,  
 Cinnick, Samantha, MPH, CHES, CPH, Columbia School of Public Health,  
 Parrilla-Lopez de Victoria, Heidi, PhD, BHE, Impactivo

**Situation in Puerto Rico Post-Maria**

**PH Training Center Network Response**

- High-priority public health needs included access to clean water, waste disposal, vector control, and management of generators
- Severely limited electricity, telecom and internet

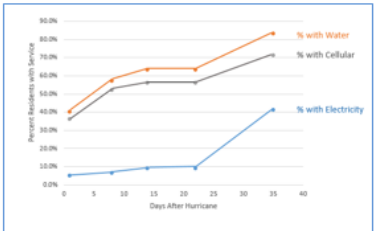

Figure 1. Locally-reported Service Availability Over Time

- Puerto Rico Department of Health (PR DOH) facilities damaged
- Most online resources are difficult to understand, not pertinent, too long and English only

- Rapid Organization and Design**
- Work plan initiated based on strong leadership and trust between partners
  - Cloud based folders used to share urgent public health needs identified by PR DOH via **Impactivo**
  - Identified and deconstructed online resources using instructional design expertise
  - Asked subject matter experts within the network (see figure 2) to fill in gaps where online resources did not exist (e.g., cistern cleaning, addressing dialysis without electricity)
  - Requested pro-bono Spanish translation support from the University of Miami
  - Impactivo** worked on reducing branding and simplification for multiple distribution streams

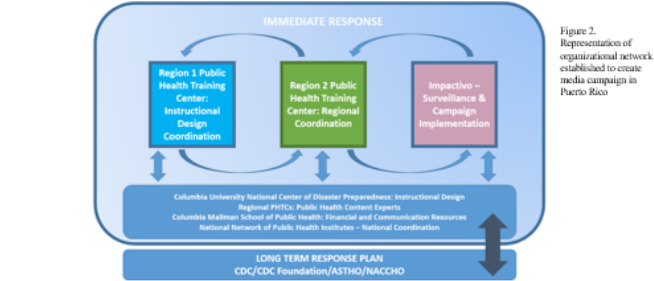

Figure 2. Representation of organizational network established to create media campaign in Puerto Rico

- Public Health Campaign changed over time**
- First, newspaper-based campaign generated printed copies
  - Second, large local organizations printed and shared
  - Third, pharmaceutical/health suppliers incorporated it into the supply chain to hospitals and moved the information with their goods.

- Resources Available**
- Trusted technical assistance partner of health department (**Impactivo LLC**) able to respond**
  - Puerto Rico Network of local partners from diverse sectors, gathered by Impactivo**
    - ✓ Newspapers
    - ✓ Universities
    - ✓ Health Departments
    - ✓ Health care providers
    - ✓ For profit Companies
    - ✓ Charitable Foundations
    - ✓ Non profits
    - ✓ Radio
    - ✓ Drug distributor
    - ✓ Associations
    - ✓ Pharmaceutical companies
    - ✓ Media providers
  - Public Health Learning Network of ten university-based Public Health Training Centers, an existing, knowledgeable and responsive team**

**Implications**

**8 ACCIONES IMPORTANTES A REALIZAR DESPUES DE UN SUELO INUNDADO**

Lavase las manos frecuentemente con agua y jabón.

**Use solamente agua embotellada o que haya sido hervida.**

**Deséchela comida que haya estado en contacto con agua de inundación o suciedad.**

**Guárdese comida y alimentos perecederos fuera de la casa.**

**Use los estufas afuera y manténgalas limpias y fuera del agua para prevenir las inundaciones.**

**Marque y limpie el área del suelo para prevenir las inundaciones.**

**Use su carro solo si es necesario.**

**Use solamente agua embotellada o que haya sido hervida.**

**PHLN is a strong, existing team, able to rapidly respond to specific needs for PH expertise**

- Established communication patterns
- Trust
- SMEs known by network
- Instructional Design technical skills

[www.impactivo.com/saludame-saludable](http://www.impactivo.com/saludame-saludable)

**Conclusion:**  
 Relative to centralized funding approaches, strong SME Network with Local Partner can generate quick outcomes in a cost-effective manner

Page 30 of 68

Strategies to Advance Health Equity: How Health Departments Can Grow a Healthy Public Food Sector

### Case Study A1: Why Do We Need Healthy Vending Guidelines?

Vending machines are everywhere in our food environments. But, they are often stocked with highly processed foods and beverages high in salt, sugar, and fat, contributing to obesity and diet-related diseases. Many vending machines are located in public buildings like schools, government agencies, hospitals or jails. Often, they are the main or only source of food or drinks in the building.

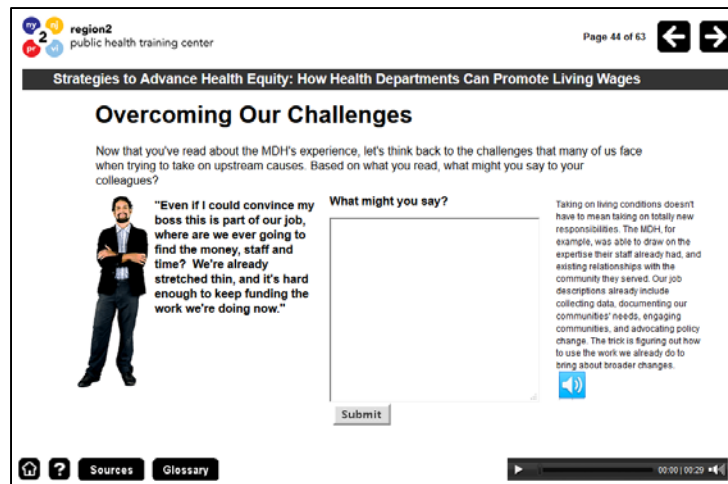

The products that public vending machines sell send a message to consumers, encouraging or discouraging consumption of certain items. That's why many government agencies have banned cigarette vending machines from public buildings, in an effort to discourage smoking in public and reduce youth access to tobacco.

Strategies to Advance Health Equity: How Health Departments Can Promote Living Wages

### Overcoming Our Challenges

Now that you've read about the MDH's experience, let's think back to the challenges that many of us face when trying to take on upstream causes. Based on what you read, what might you say to your colleagues?

"Even if I could convince my boss this is part of our job, where are we ever going to find the money, staff and time? We're already stretched thin, and it's hard enough to keep funding the work we're doing now."

What might you say?

Taking on living conditions doesn't have to mean taking on totally new responsibilities. The MDH, for example, was able to draw on the expertise their staff already had, and existing relationships with the community they served. Our job descriptions already include collecting data, documenting our communities' needs, engaging communities, and advocating policy change. The trick is figuring out how to use the work we already do to bring about broader changes.

### SPECIALIZED TOOLS AND APPS

#### ELI

The Emergency Law Inventory (ELI) is a tool developed by the University of Pittsburgh Graduate School of Public Health and its partners at the New York City Department of Health and Mental Hygiene, Allegheny County Health Department (Pittsburgh, Pennsylvania), and Mahoning, Columbiana, and Trumbull Counties Medical Reserve Corps (Ohio).

ELI helps individuals navigate through laws that impact volunteer participation in preparing for or responding to disasters. The inventory focuses on four areas of law: Liability, License Reciprocity, Scope of Practice, and Workers' Benefits. ELI provides over 1500 clear, concise summaries of laws in all 50 states, the District of Columbia, eight (8) U.S. territories, and the federal government. The laws are searchable by profession and jurisdiction so users can identify the provisions that impact them specifically.

[Access ELI](#)

[Click to view](#)

#### FRED

Framework for Reconstructing Epidemiological Dynamics (FRED) is an open source modeling system developed by the University of Pittsburgh Public Health Dynamics Laboratory in collaboration with the Pittsburgh Supercomputing Center and the School of Computer Science at Carnegie Mellon University.

FRED supports research on the dynamics of infectious disease epidemics and the interacting effects of:

- Mitigation strategies
- Viral evolution
- Personal health behavior

FRED is available through open source in the hopes of making large-scale agent-based epidemic models more useful to the policy-making community, the research community, and as a teaching tool for students in public health.

[Access FRED](#)

#### Project TYCHO ®

Project Tycho ® is a project at the University of Pittsburgh to advance the availability and use of public health data for science and policy making. Currently, the Project Tycho ® database includes data from all weekly notifiable disease reports for the United States dating back to 1888. These data are freely available to anybody interested. Additional U.S. and international data will be released twice yearly.

All About Tycho ® provides users with an introduction to Tycho ® and tips for its use.

[Access Project Tycho ®](#)

[Click to view](#)

#### CDC Epi Info™

Epi Info™ is a free software tool allowing users to create easy data entry forms, database construction, and data analyses with epidemiologic statistics, maps, and graphs for public health professionals who may lack an information technology background. Epi Info™ is used for outbreak investigations; for developing small to mid-sized disease surveillance systems; as analysis, visualization, and reporting components of larger systems; and in the continuing education in the science of epidemiology and public health analytic methods at schools of public health around the world.

[Access Epi Info™](#)

#### CDC WONDER

Wide-ranging Online Data for Epidemiologic Research (WONDER) is an easy-to-use, menu-driven system for the analysis of public health data. Users can access statistical research data published by CDC, as well as reference materials, reports, and guidelines on health-related topics. WONDER online databases provide data dissemination, online data query capabilities, analysis, visualization, and reporting for public health data collections.

## Region IV and Infectious Disease

# Approach to Content Area

## Considerations

- Scope of infectious disease is broad.
- There is both an *emerging* component and a *predictable* component.
- Infectious disease (ID) provides an opportunity to leverage non-PHTC resources.
- Great deal of ID-related trainings are already in existence.

## Approach

- Environmental scan and subsequent database of trainings \*
- National webinar series \*
- Other ID-related trainings

\* *Central Office led activity*

# Environmental Scan and Subsequent Database

Updated every 12-18 mos.

Reviewed trainings from 80 organizations

Searchable

Current database (2017)

- Trainings developed 2012-2017
- 570 trainings from 68 organizations
- Most common content areas:
  - Vaccination/Immunization (15%)
  - HIV/AIDS (12%)
  - STD (11%)
- Common modalities
  - 62% webinars
  - 21% online courses

## Database Categories

- Bacterial Diseases
- Disease Detection
- Ebola
- Foodborne, Waterborne, and Environmental Diseases
- Global Migration and Quarantine
- Healthcare Associated Infections

# Environmental Public Health (EPH)

## Inquiry Process

# Reflection quotes

*"[The conversation] was very insightful and thoughtful and it reflected the current inconsistencies and gaps prevailing in public health practice." -- Conversation 1 participant*

**Some thought the dialogue was valuable and were affirmed that other LHDs experience similar challenges**

*"The facilitation was excellent. All were able to share their viewpoints and build on other comments. Very productive use of time. It was good to get into specifics to hear various differences and similarities in who handles various programs."  
-- Conversation 1 participant*

*"That even though I represent a small LHD, it sounds like many of my challenges are shared with larger ones."  
-- Conversation 1 participant*

*"The discussion content choices for this project were unexpected; however, it became clear how important it is for environmental health leaders to engage in discussions about emerging issues and improving the practice of environmental health. The lack of EH inclusion in community health needs assessments is a concern which must be addressed."  
-- Conversation 3 participant*

*"We need to do a better job marketing what sanitarians do."  
-- Conversation 2 participant*

**Specific needs were illuminated**

*"Environmental issues may be overlooked, as citizens assume (take for granted) that their water is safe, food is safe and the air quality adequately monitored. E.H. practitioners may need better 'story telling skills' to share their value and need for adequate program funding."  
-- Conversation 3 participant*

# Great Lakes Public Health Training Collaborative

## Environmental Public Health Inquiry: Initiative Summary

Illinois | Indiana | Michigan | Minnesota | Ohio | Wisconsin

### What is the project and what was the purpose?

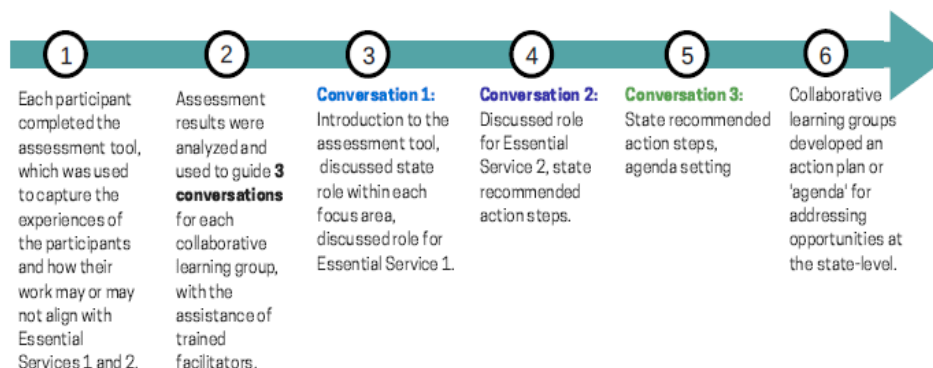

Environmental Public Health (EPH) has never been more important than it is today. With ongoing and emerging concerns like Flint's water crisis and weather related emergencies, it is critical that we examine and enhance EPH efforts. EPH has been added as an essential function in Public Health 3.0 to assess the current state of public health. The Great Lakes Public Health Training Collaborative's (GLPHTC) intent is to understand how to assess and create change in the field of EPH through an inquiry project.

**The project's aim is to provide local Environmental Public Health professionals from each state an opportunity to identify needs and make recommendations to enhance the value and role of EPH in their state.**

<b>61</b> Participants	<b>18</b> Conversations	<b>6</b> States	<b>1</b> Region	<b>1</b> Agenda
---------------------------	----------------------------	--------------------	--------------------	--------------------

### What was the process?

- Multi-step process incorporating **action learning**.
- Collaborative learning groups were formed in 6 states comprised of 5-10 directors and environmental public health personnel from local health departments (LHDs) within each state.
- The collaborative learning groups assessed Essential Services 1 and 2 of the 10 Essential Services of Public Health (CDC, 2013) with a focus on **air, food, water, built environment**, and other relevant environmental public health focus areas ([www.neha.org/eh-topic](http://www.neha.org/eh-topic)).
- The collaborative learning groups followed a **6-step process**:

For more information and training opportunities visit our website at: [www.greatlakesphct.com](http://www.greatlakesphct.com)

### Common Challenges Were Cited Across the States

- |  |   |
|--|---|
| <b>A lack of political will or prioritization of EPH</b>                   | <ul style="list-style-type: none"> <li>Need for prioritization of EPH threats by state and local leadership</li> <li>Lack of involvement of EPH in developing policy supportive for community EPH policy</li> </ul>   |
| <b>Limited data collection and analysis systems to inform EPH needs</b>    | <ul style="list-style-type: none"> <li>Limited resources and infrastructure in collecting, tracking, disseminating data</li> <li>Need for training in framing issues to show value, gain priority, and secure funding</li> </ul>  |
| <b>System fragmentation among LHDs and between the state and LHDs</b>      | <ul style="list-style-type: none"> <li>Lack of clarity on if state or local EPH personnel are responsible for specific activities</li> <li>Confusion about whether local EPH role includes education/prevention or response</li> <li>EPH operational standardization within state and local agencies is needed</li> </ul> |
| <b>A lack of integration between EPH and other public health functions</b> | <ul style="list-style-type: none"> <li>Limited inclusion of EPH in public health actions, assessments, planning, and policies</li> <li>Other public health professions have limited understanding of role of EPH</li> </ul>   |
| <b>The public lacks a clear understanding of the role of EPH</b>           | <ul style="list-style-type: none"> <li>The public does not understand what is under the purview of the LHDs</li> <li>Better public communications mechanisms and platforms are needed</li> </ul>  |
| <b>Funding Constraints</b>   | <ul style="list-style-type: none"> <li>Financial support is limited at local, state, and federal levels</li> <li>Funding, rather than need, drives activities</li> </ul>  |
| <b>Emerging Issues (e.g. Zika)</b>   | <ul style="list-style-type: none"> <li>Insufficient capacity to address newer EPH issues and health related emergencies</li> <li>Emergent issues may compromise capacity to address ongoing EPH needs</li> </ul>  |
| <b>A lack of policy, standards, and mandates</b>                           | <ul style="list-style-type: none"> <li>Limited policy, standards, and mandates supportive of state and local EPH operations</li> </ul>  |
| <b>A lack of workforce competency and capacity</b>                         | <ul style="list-style-type: none"> <li>Limited workforce capacity in fulfilling necessary roles and responsibilities</li> <li>The need for EPH to define and communicate role to those entering the workforce</li> </ul>  |

### Recommendations

1. Improve standardized environmental public health informatics and surveillance systems to support collection and analysis of EPH data (e.g. Minnesota Department of Health Annual Reporting for Local Public Health).
2. Develop improved mechanisms of **sharing and integration** (e.g. apply for shared service grants).
3. Address fragmentation between state and local entities by **clarifying and/or standardizing the role of EPH** (e.g. create a position paper).
4. **Build leadership capacity of the EPH workforce** to: better utilize data to drive decisions; facilitate collaborative processes; and organize and advocate for EPH needs (e.g. develop and/or promote leadership institutes).
5. Expand access and utilization of **evidence-based practices** to address ongoing and emerging needs (e.g. vapor intrusion, Zika)
6. **Develop workforce competency** for Environmental Public Health to build the pipeline and current workforce (e.g. standard EPH roles such as Environmental Health Specialist)
7. **Expand and integrate the role of Environmental Public Health within public health activities** (e.g. community health assessment; Health in All Policies)
8. **Expand connections and partnerships** with state associations and other agencies to better address broader health needs (e.g. Wisconsin partnership between its NEHA and LPHA affiliates)
9. Use various communication platforms to **demonstrate the role and value of EPH** (e.g. YouTube videos, etc.)

This project was supported by the Health Resources and Services Administration (HRSA) of the U.S. Department of Health and Human Services (HHS) under grant number U49CE002788. Region V Public Health Training Collaborative. This information or content and conclusions are those of the author and should not be construed as the official position or policy of, nor should any endorsements be inferred by HRSA, HHS or the U.S. Government.

# Region 6 South Central Public Health Training Center Behavioral Health Training Development

- The Region 6 SCPHTC includes:
  - Tulane University (central office)
  - Oklahoma University Health Sciences Center (LPS)
  - University of New Mexico (LPS)
  - Texas Health Institute (LPS)
- Topic Area: Behavioral Health
- Several courses and course series, at various stages of development, that address Behavioral Health

# Behavioral Health Courses and Course Series

- Behavioral Health 101 for Public Health Practitioners
- Public Health Meets Behavioral Health
  - Creating the Conditions for Optimal Behavioral Health in any Delivery System
- Overview of Behavioral Health for AI/AN Populations
- Geographic Information Systems (GIS) and Behavioral Health (part of our “Data Into Action for Tribes” course series)
- Legal and Ethical Considerations Related to the use of Service Emotional Support and Therapy Animals
- Aging and Behavioral Health
  - America’s Other Drug Problem – Elderly and Medication Management
  - Elderly Abuse
- Transgender Health Series

# Transgender Health Series – Course Descriptions

- **Transgender Health 101: A Foundation Course on Transgender People and Public Health:** A foundation in understanding transgender people and the trans community in the context of population health. The course is designed for health providers and anyone interested in becoming more familiar with the transgender community
- **Transgender Health 102: Transgender Patient-Provider Relationship:** A foundational understanding for healthcare professionals to build and improve patient-provider relationships with trans patients. The course serves as an informational resource for healthcare professionals to the transgender population, and provides evaluative and action plan methods to create a transgender competent healthcare environment.
- **Transgender Health 103: LGBTQ+ Workplace Inclusion:** A foundation in understanding the lesbian, gay, bi-sexual, transgender, and queer (LGBTQ) community in the context of workplace inclusion for healthcare, corporate, and community organizations. The course provides a resource for employers and employees of any organization interested in creating and sustaining an LGBTQ-inclusive workplace.
- **Transgender Health 104: Psychological Distress:** A resource for health care, behavioral health, and public health practitioners administrators, and leaders who wish to enhance their capacity to serve the transgender community in their practice. The course reviews behavioral health issues pertaining to transgender, gender non-binary, and intersex individuals.
- **Transgender Health 105: Role of Endocrinology in the Transgender Community:** A resource for healthcare professionals on hormone replacement therapy for transgender patients. The course provides insight to transgender patients' perspective, as well as reviews the medical processes, patient's physical changes, and insurance navigation for hormone replacement therapy.
- **Transgender Health 106: Pre and Post-operative Care:** A resource for healthcare professionals on the various types of female-to-male and male-to-female transition related surgeries, insurance navigation, and insight to transgender patients' perspective.
- These courses will be certified as "Authorized Provider" courses by the *Human Right's Campaign' Healthcare Equality Index (HEI)*. Several hundred hospitals require 35+ hours of employee training each year using HEI authorized providers.
