

# USE OF PUBLIC HEALTH CONCEPTS FOR CHWS

## What do Community Health Workers need to know about Public Health?

In this course, participants will learn more about "what is public health", add to what they already know about medical systems, and gain a better understanding of how community health workers fit into the framework.

After completing this training, community health workers will be able to:

- Explain what is public health and why it is so important.
- Describe how public health has impacted life expectancy over the past century.
- Identify the types of public health challenges faced by vulnerable populations.
- Name the various parties and agencies involved in a public health infrastructure
